

eNlight Meet

A Personalized, Scalable and Secure Video Conferencing solution.

Overview

eNlight Meet is a secure and reliable video conferencing platform, allowing seamless communication over audio and video channels. Meet is extremely user friendly and highly available for everyday communication between teammates, classroom environments and in places where close to real communication needs to happen between individuals remotely.

Highlights

1. **Fast Meetings:** Schedule meetings by easily creating meeting room, without the fuss of navigating through settings and buttons. A simple URL link starts the meeting and fellow participants can be invited easily via meeting URL or email invite.
2. **Secure Meeting Rooms:** All audio and video interactions are secured at different levels. SSL/TLS ensures network security. Meeting room authentication ensures only expected members join. End-to-End encryption ensures communication is encrypted end to end.
3. **Collaborative Rooms:** Meet comes with essential features that enable productive collaboration between participants. Easy to use chat room enables both public and private communication over text. Varied screen sharing options allow enable data sharing.
4. **Flexible Room Sizes:** Meet provides flexible and scalable meeting rooms that can accommodate minimum of two participants and scale up to 50 participants without any disturbance. The number of participants can be further scaled up to 75 to 100 participants in single meeting room.

5. **Recording Sessions:** With eNlight Meet, the organizers can record the meeting from start to end. These recordings are made available later for playback on demand.
6. **Platform Independent:** eNlight Meet does not require an additional application to be installed on the local system. Meetings can be hosted on a web browser directly.
7. **Best Video Quality out of the box:** eNlight Meet automatically adjusts your video quality based upon available network speeds to provide best possible experience for all participants. Also provides manual settings to change video quality of the ongoing meeting.
8. **Administrative Controls:** The organizers initiating the meeting have the abilities to invite participants, view network status, detect mic audio interruptions, control participant's availability.
9. **Live Streaming:** eNlight Meets offers a live stream capability where the administrator can Live Stream the ongoing meetings to platforms like YouTube and Facebook.

Security Aspect

1. **Encrypted meetings:** eNlight Meet is 100% privacy oriented. Meetings cannot be compromised because of the additional security layer in the backend. eNlight Meet uses *hop-by-hop* encryption. This means that anything that you send traveling to the server is encrypted, then decrypted on the server, re-encrypted and sent to everyone who is meant to receive it. In this way, nobody can randomly enter an ongoing meeting.
2. **Active Directory Integration:** eNlight Meet can be customized to work with the local active directory service,

because of which, only the users in that active directory can host or join meetings, according to the user roles.

- 3. Password protected meetings:** Meetings hosted on eNlight Meet can also be password protected in order to maintain authorized or for-the-purpose individuals only in the meeting

Personalized eNlight Meet

Keeping in mind multiple organizational needs, eNlight Meet can be further configured to suit the organizational needs and hierarchy. eNlight Meet can be integrated with the local active directory, which allows authorized access to the service only from within the organization. eNlight Meet can also be further modified within its scope for the addition of new features.

Auto Scaling

eNlight Meet can automatically scale the hardware resources as per the incoming workload. The Meeting infrastructure scales up and down itself automatically to ensure that the meeting goes on smoothly without any hurdles.
